Incident Lifecycle Automation in ServiceNow

Phase 5 – Project Development Phase

Project Documentation

5. Project Development Phase

This phase contains the actual ServiceNow implementation. The following activities implement the planned incident lifecycle.

Activity 1: Configure Service Create Remote Access.

Path: All → cmdb_ci_service.LIST → New.

Configure Name: Remote Access.

Set Operational Status: Operational.

Activity 2: Configure Service Offering Create Corporate VPN.

Path: All → service_offering.LIST → New.

Configure Name: Corporate VPN.

Set Parent: Remote Access.

Set Operational Status: Operational.

Activity 3: Configure Configuration Item Create VPN Gateway.

Path: All → cmdb_ci.LIST → New.

Configure Name: VPN Gateway.

Activity 4: Incident Record Creation

Impersonate Beth Anglin.

Navigate to Service Operations Workspace → List → Incidents → Open → New.

Short description: Unable to connect to Corporate VPN from home office.

Caller: Michael Hoefer.

Assignment group: Service Desk.

Save the incident.

Activity 5: Incident Classification Update Description.

Channel: Phone.

Category: Network.

Subcategory: VPN.

Urgency: 2 - Medium.

Service: Remote Access.

Service Offering: Corporate VPN.

Configuration Item: VPN Gateway.

Add Work notes.

Click Assign to me and save.

Activity 6: Knowledge Integration

Open Agent Assist.

Verify Knowledge Articles are selected.

Verify relevant articles are displayed.

Open an article.

Verify the Helpful option works.

Attach the article to the incident.

Return to the incident and verify the Knowledge Article appears in the Activity Log.

Activity 7: Reassignment & Escalation

Update the Watch List with Samantha Green.

Add Beth Anglin to the Work notes list.

Change Assignment Group to Network.

Verify the Assigned to field is cleared automatically.

Save the incident.

Activity 8: Level 2 Investigation Impersonate David Loo.

Open the VPN incident.

Verify incident description is available.

Verify knowledge articles are available.

Verify SLA is visible.

Verify Related Records are available.

Click Assign to me.

Activity 9: Emergency Change Request

Update Configuration Item: VPN Gateway → VPN-SRV-02.

Click Create Change Request → Emergency → Continue.

Category: Network.

Impact: 1 - High.

Short description: Restart VPN-SRV-02 service.

Description: Multiple users unable to connect. Service appears unresponsive. Restart required.

Assignment group: Network.

Assigned to: David Loo.

Create and save the Change Request.

Return to the incident.

Set State: On Hold.

Set On Hold Reason: Awaiting Change.

Save.

Activity 10: Child Incident

From Related Records → Child Incidents, create a child incident.

Short Description: Unable to connect to Corporate VPN.

Caller: Any user.

Description: User receiving VPN authentication failure error.

Save the child incident.

Return to the parent incident and verify the child incident is displayed.

Activity 11: Incident Resolution

Add probable cause: VPN-SRV-02 service was suspended and required restart.

Add Resolution Code: Workaround provided.

Add Resolution Notes: Restarted VPN-SRV-02 service as per emergency change request.

Save the resolution.

Click Resolve and confirm the resolution.

Activity 12: Knowledge Creation

Click Create Knowledge.

Open Related Records → Created Knowledge.

Verify Short Description is copied.

Verify Issue is copied.

Verify Resolution is copied.

Verify Source Task is copied.

Publish the Knowledge Article.

Activity 13: Final Validation

Verify Parent Incident = Resolved.

Verify Child Incident = Resolved.

Verify Change Request = Linked to Incident.

Verify Knowledge Article = Created.

Verify Resolution = Documented.

Verify Cause = Documented.

Verify SLA = Visible.

Verify Related Records = Available.

Verify Activity Log = Complete.

5.1 Final Validation Matrix

Validation	Expected Result
Parent Incident	Resolved
Child Incident	Resolved
Change Request	Linked to Incident
Knowledge Article	Created
Resolution	Documented
Cause	Documented
SLA	Visible
Related Records	Available
Activity Log	Complete

5.2 Development Outcome

The development phase demonstrates the complete ServiceNow implementation from supporting-record configuration through incident creation, classification, knowledge integration, escalation, Level 2 investigation, emergency change, child incident, resolution, knowledge creation, and final validation.

5.3 Conclusion

The Project Development Phase completes the practical implementation of the planned Incident Lifecycle Automation workflow and provides the evidence required for final project validation.
