Incident Lifecycle Automation in ServiceNow

Phase 1 – Ideation Phase

Project Documentation

Item	Details
Project	Incident Lifecycle Automation in ServiceNow
Document	Phase 1 – Ideation Phase
Platform	ServiceNow
Domain	IT Service Management (ITSM)
Primary Scenario	Unable to connect to Corporate VPN from home office

1. Ideation Phase

The Ideation Phase establishes the project problem, proposed solution, project vision, and expected business outcome for a structured Incident Management lifecycle in ServiceNow.

1.1 Problem Identification

Organizations often receive IT incidents through emails, phone calls, or informal communication. Without a structured Incident Management process, incidents may be:

- Improperly classified
- Assigned to the wrong support team
- Delayed during investigation
- Difficult to track
- Escalated without proper documentation
- Resolved without recording the root cause
- Difficult to use for future knowledge creation

This creates SLA risks and reduces visibility into the overall incident lifecycle.

1.2 Proposed Solution

The proposed solution is to implement a structured and automated Incident Management lifecycle in ServiceNow.

The solution connects the following processes:

Incident Management → Knowledge Management → Assignment & Escalation → Change Management → Child Incidents → Resolution → Knowledge Creation → SLA Tracking

1.3 Project Vision

The project aims to provide Service Desk and Level 2 support teams with a standardized process to:

- Create incidents
- Classify and prioritize incidents
- Use knowledge articles for troubleshooting
- Escalate incidents to appropriate teams
- Create emergency changes when required
- Track child incidents
- Document cause and resolution
- Generate knowledge from resolved incidents
- Monitor SLAs and related records

1.4 Project Outcome

The expected outcome is an end-to-end Incident Management process that improves:

- Incident resolution time
- SLA compliance
- Incident classification
- Team collaboration
- Change traceability
- Knowledge reuse
- Service visibility

1.5 Scope at Ideation Level

- Service, service offering, and configuration item setup
- Incident creation and classification
- Knowledge investigation and attachment
- Reassignment and Level 2 escalation
- Emergency Change integration
- Child Incident management
- Incident resolution and knowledge creation
- SLA and related-record validation

1.6 Conclusion

The Ideation Phase provides the foundation for the project by identifying the operational problem and defining a ServiceNow-based solution capable of supporting a complete and traceable incident lifecycle.
